

## Q&A

1. Construct right-linear or left-linear grammars for the regular language of binary strings in which every 0 is followed by 11. Construct a parse tree for the string 0111011

Solution:

LHS		RHS
S	$\rightarrow$	1S
S	$\rightarrow$	011S
S	$\rightarrow$	$\lambda$

### Automata Formal Languages & Logic

2. Match the Regular expression with regular grammar.

Regular Expression	Regular Grammar
$0^*(1(0+1))^*$	$S \rightarrow 0S \mid A \mid \lambda$ $A \rightarrow 1B$ $B \rightarrow 0A \mid 1A \mid 0 \mid 1$
$0^*(10)^*1(0)^*$	$S \rightarrow 0A$ $A \rightarrow 10A0 \mid B$ $B \rightarrow 1$
$(0+10^*10^*)^*$	$S \rightarrow 1A \mid 0S \mid \lambda$ $A \rightarrow 1S \mid 0A$
$(1+0)^*10(1+0)^*$	$S \rightarrow 0S \mid 1A$ $A \rightarrow 1A \mid 0B$ $B \rightarrow 1A \mid 0B \mid \lambda$
$(0+1(01^*0)^*1)^*$	$S \rightarrow 0S \mid 1A \mid \lambda$ $A \rightarrow 1S \mid 0B$ $B \rightarrow 0A \mid 1B$

3. Convert the automata to regular grammar.

Solution:

$S \rightarrow 0A \mid 1C$

$C \rightarrow 1S \mid 0B$

$B \rightarrow 0C \mid 1A$

$A \rightarrow 0S \mid 1B \mid \lambda$

4. Convert the regular grammar to finite automata.

$S \rightarrow A|B$

$A \rightarrow 01A | \lambda$

$B \rightarrow 10B | \lambda$

Solution:

NFA:

DFA:
