# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

For regular languages  $L_1$  and  $L_2$  we will prove that:

Union :  $L_1 \cup L_2$

Concatenation:  $L_1 L_2$

Star:  $L_1^*$

Reversal:  $L_1^R$

Complement:  $\overline{L_1}$

Intersection:  $L_1 \cap L_2$

Are regular languages

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

Take two languages

Regular language

$L_1$

$$L(M_1) = L_1$$

Regular language

$L_2$

$$L(M_2) = L_2$$

NFA

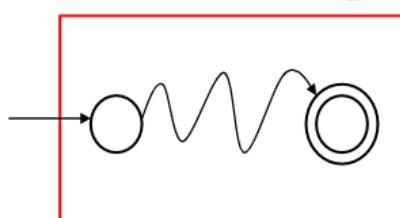

$M_1$

Single accepting  
state

NFA

$M_2$

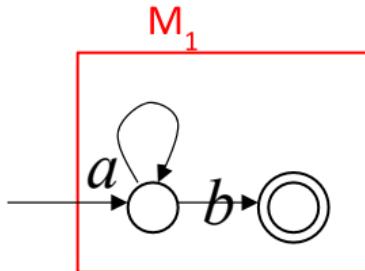

Single accepting  
state

# Automata Formal Languages and Logic

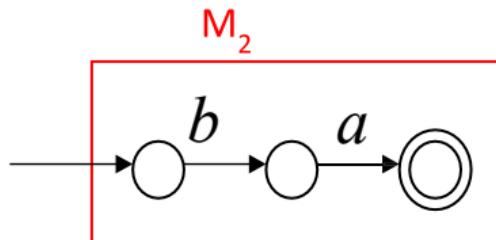

## Unit 2 - Properties of Regular Languages

Example

$$L_1 = \{a^n b\}$$

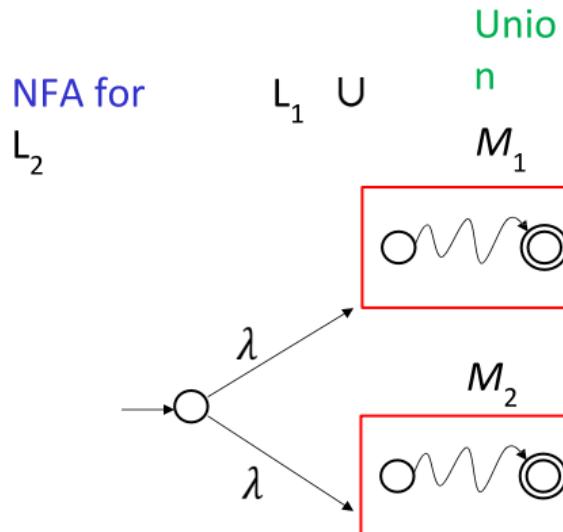

$$L_2 = \{ba\}$$

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

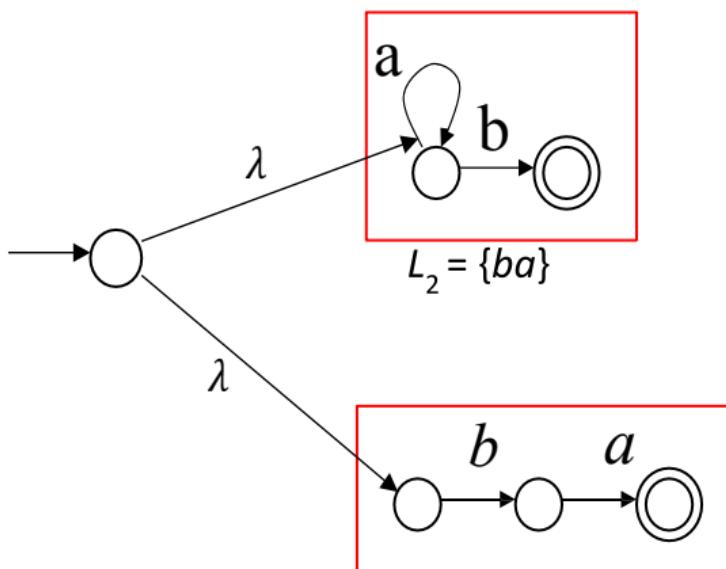

$$w \in L_1 \cup L_2 \iff w \in L_1 \text{ or } w \in L_2$$

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

NFA for  $L_1 \cup L_2 = \{a^n b\} \cup \{ba\}$

$$L_1 = \{a^n b\}$$

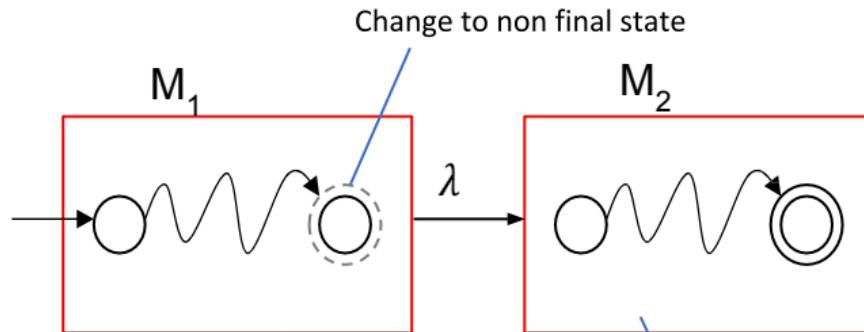

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

### Concatenation

NFA for  $L_1 L_2$

$w \in L_1 L_2 \iff w = w_1 w_2 : w_1 \in L_1 \text{ and } w_2 \in L_2$

# Automata Formal Languages and Logic

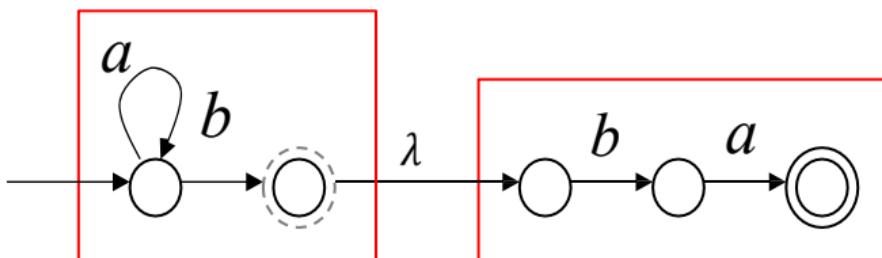

## Unit 2 - Properties of Regular Languages

### Example

NFA for  $L_1 L_2 = \{a^n b\} \{ba\} = \{a^n bba\}$

$$L_1 = \{a^n b\}$$

$$L_2 = \{ba\}$$

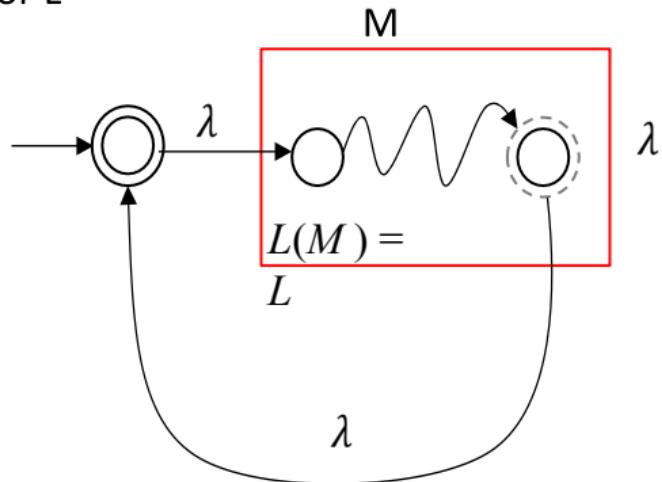

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

### Star Closure

NFA for  $L^*$

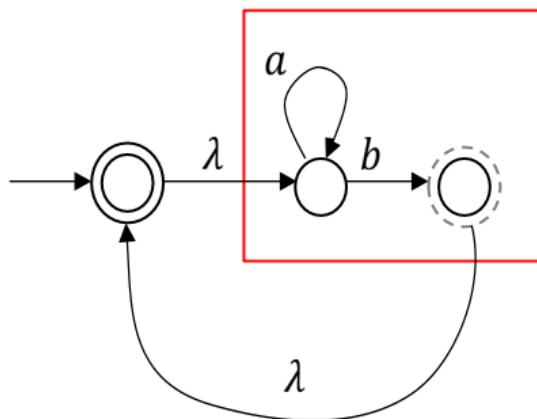

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

### Example

NFA for  $L^* = \{a^n b\}^*$

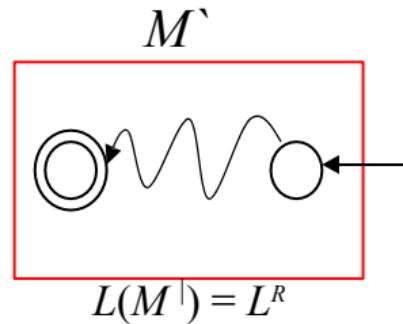

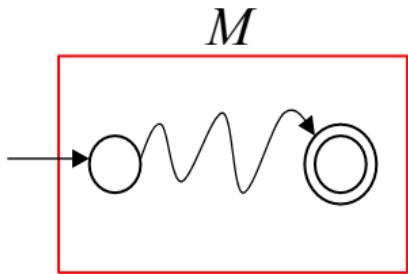

$$L_1 = \{a^n b\}$$

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

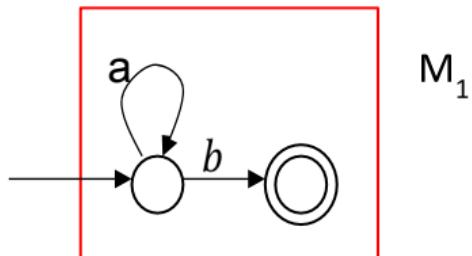

Reverse

# Automata Formal Languages and Logic

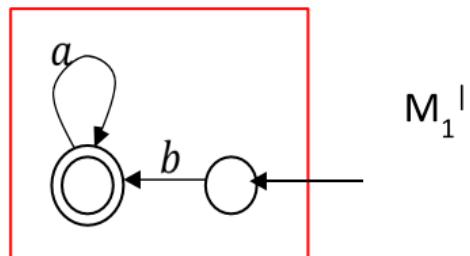

## Unit 2 - Properties of Regular Languages

$$L_1 = \{a^n b\}$$

$M_1$

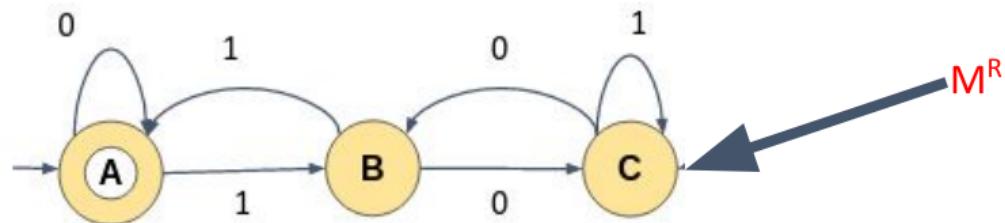

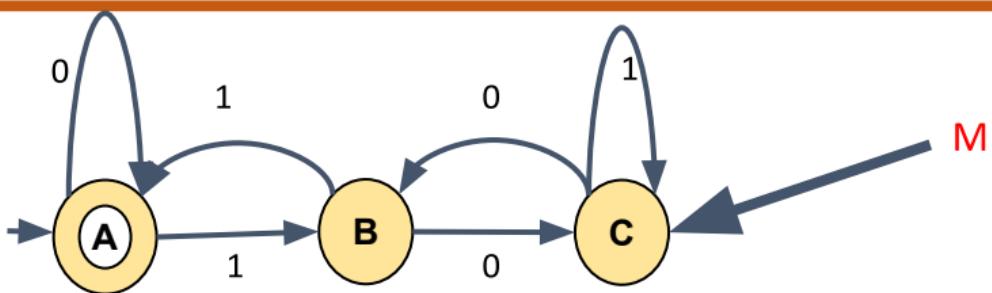

$$L^R = \{ba^n\}$$

$M_1^R$

# Automata Formal Languages and Logic

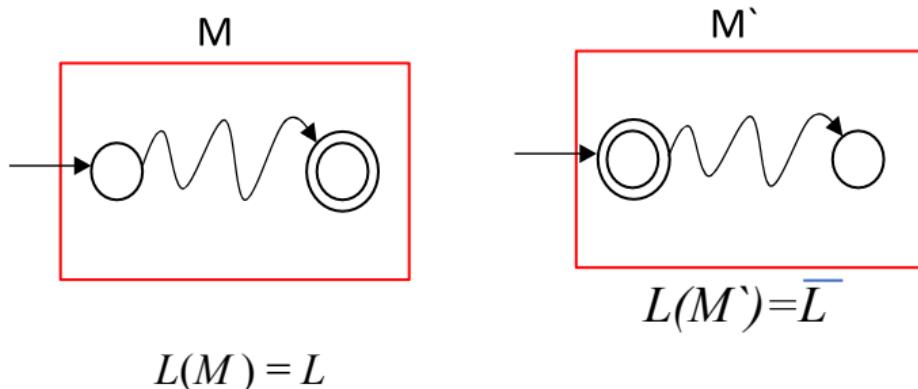

## Unit 2 - Properties of Regular Languages

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

### Complement

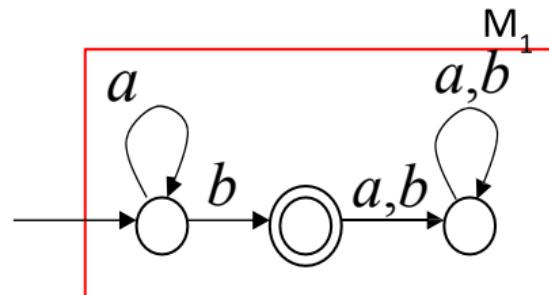

1. Take the DFA that accepts  $L$
2. Make accepting state has non accepting and vice versa

# Automata Formal Languages and Logic

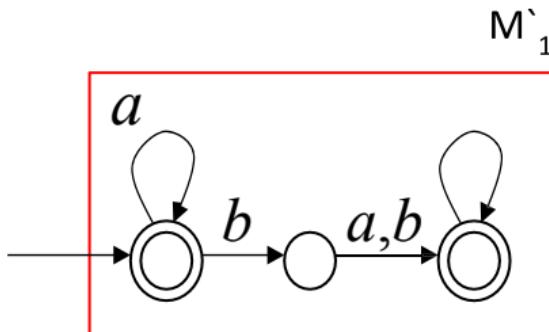

## Unit 2 - Properties of Regular Languages

### Example

$$L_1 = \{a^n b\}$$

$$\overline{L}_1 = \{a,b\}^* - \{a^n b\}$$

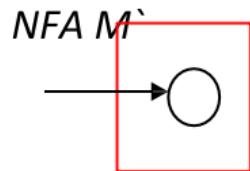

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

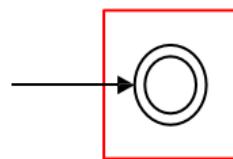

NFAs cannot be used for complement

Make accepting state has non accepting and vice versa

NFA  $M$

$$L(M) = \{ \}$$

$$L(M^c) = \{\lambda\} \neq \overline{L(M)}$$

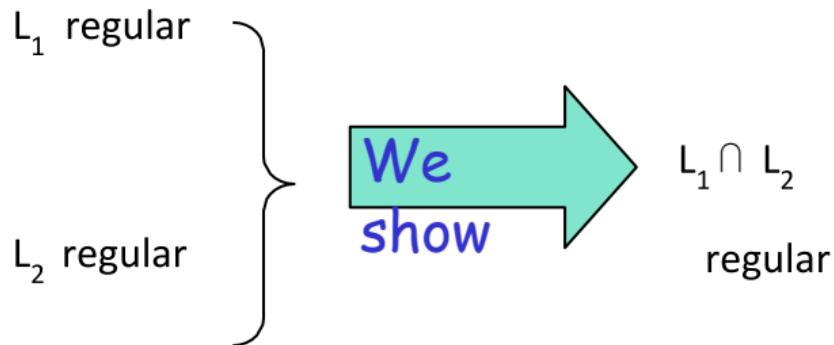

$$\overline{L(M)} = \Sigma^* = \{a,b\}^*$$

It is not the  
complement

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

### Intersection

DeMorgan's Law:  $L_1 \cap L_2 = \overline{\overline{L_1} \cup \overline{L_2}}$

$L_1, L_2$  regular, regular

→  $\overline{L_1}, \overline{L_2}$  regular, regular

→  $\overline{L_1} \cup \overline{L_2}$  regular

→  $\overline{\overline{L_1} \cup \overline{L_2}}$  regular

→  $L_1 \cap L_2$  regular

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

---

Example

$$\left. \begin{array}{l} L_1 = \{a^n b\} \text{ regular} \\ L_2 = \{ab, ba\} \text{ regular} \end{array} \right\} \rightarrow L_1 \cap L_2 = \{ab\}$$

regular

Another Proof for Intersection

Machine  $M_1$

DFA for  $L_1$

Machine  $M_2$

DFA for  $L_2$

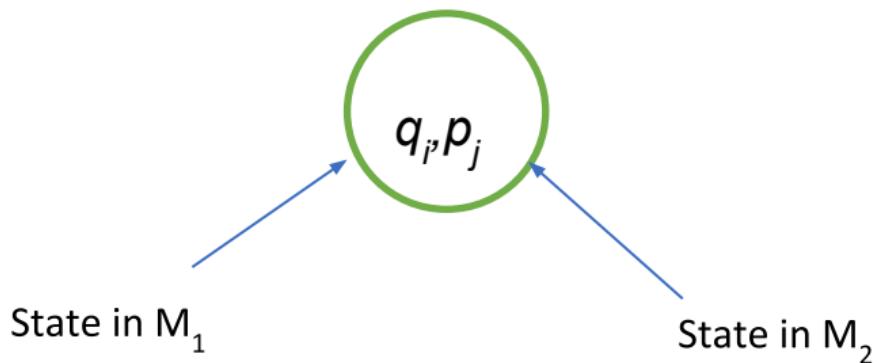

Construct a new DFA  $M$  that accepts  $L_1 \cap L_2$

$M$  simulates in parallel  $M_1$  and  $M_2$

# Automata Formal Languages and Logic

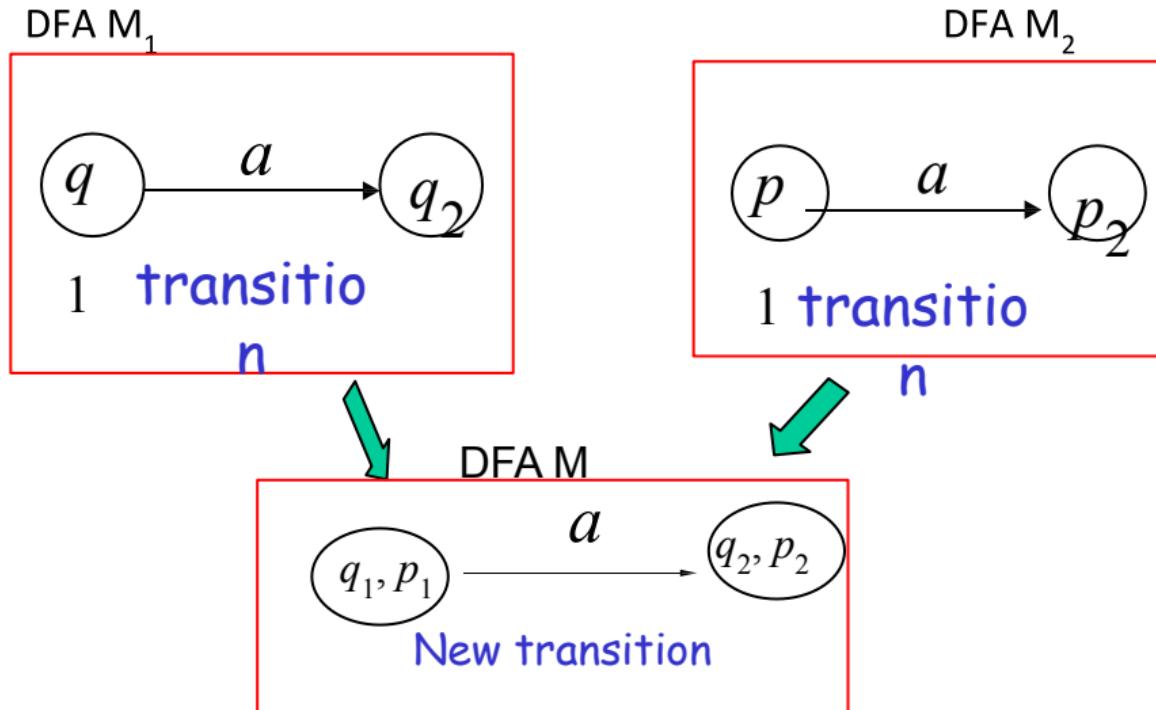

## Unit 2 - Properties of Regular Languages

States in M

# Automata Formal Languages and Logic

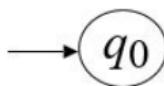

## Unit 2 - Properties of Regular Languages

# Automata Formal Languages and Logic

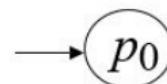

## Unit 2 - Properties of Regular Languages

DFA  $M_1$

initial state

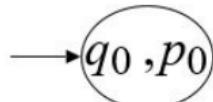

DFA  $M_2$

initial state

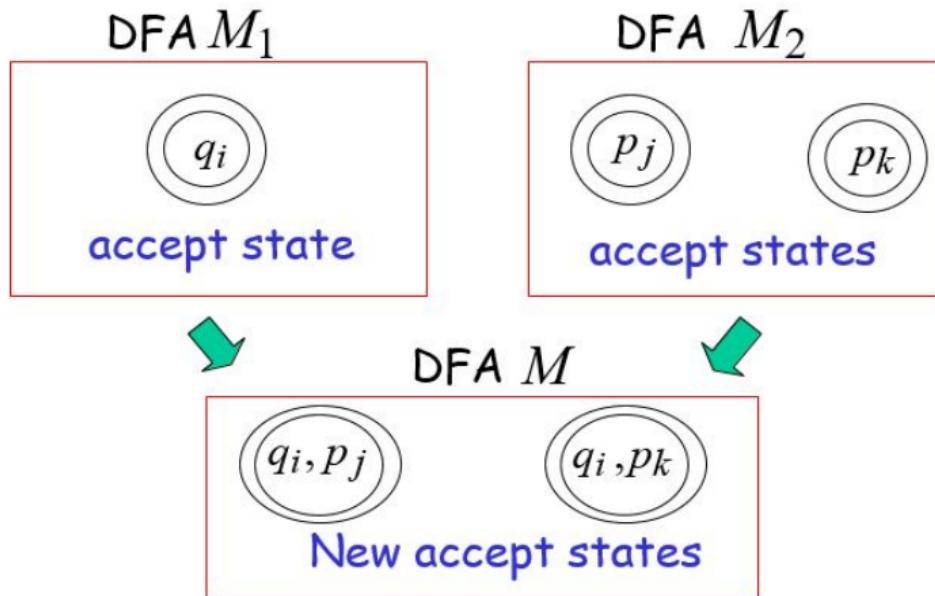

DFA  $M$

New initial state

# Automata Formal Languages and Logic

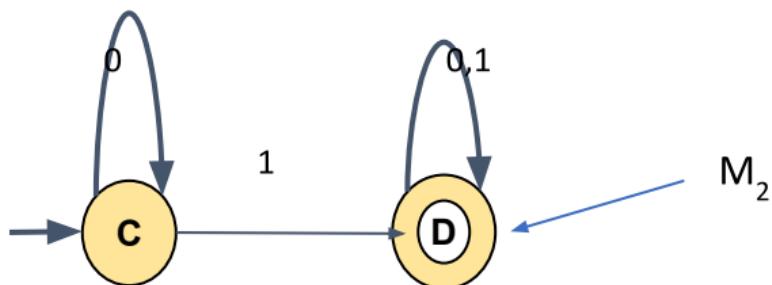

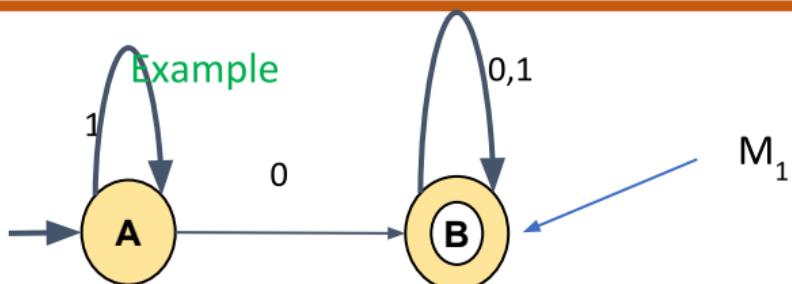

## Unit 2 - Properties of Regular Languages

Both constituents must be accepting states

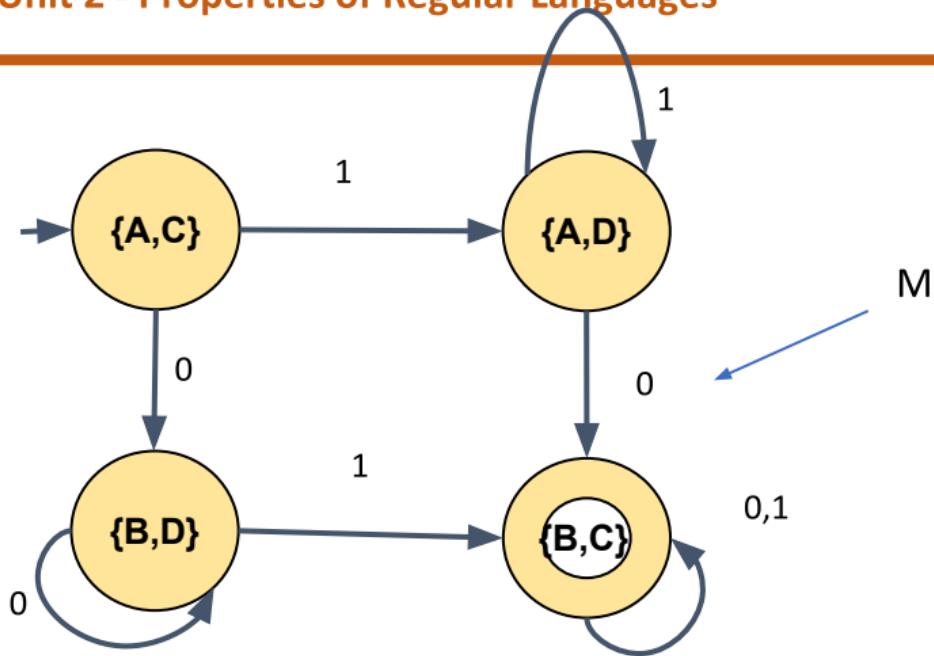

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

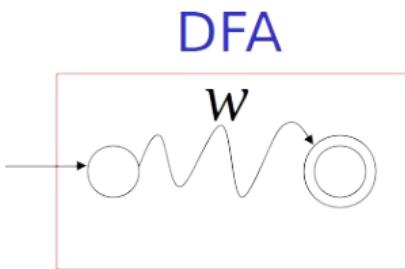

# Automata Formal Languages and Logic

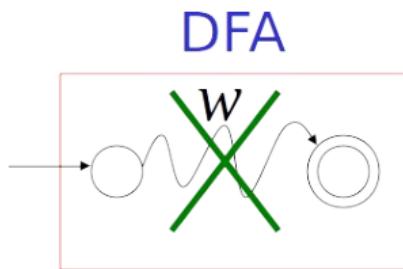

## Unit 2 - Properties of Regular Languages

### Decidable properties of regular language

#### 1. Membership Question

$w \in L$

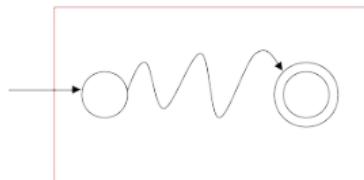

$w \notin L$

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

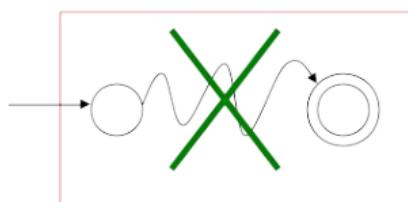

### 2. Testing Emptiness

DFA

$$L \neq \emptyset$$

DFA

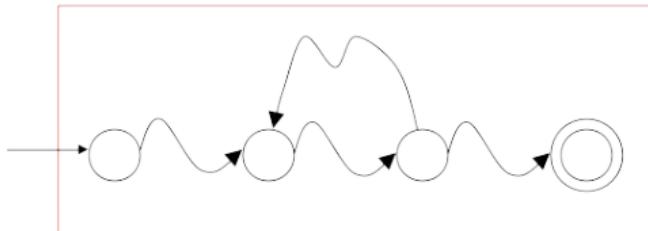

$$L = \emptyset$$

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

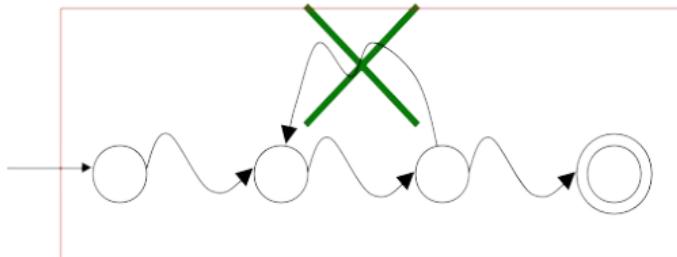

3. Is a given regular language finite or Infinite?

DFA

$L$  is infinite

DFA

$L$  is finite

# Automata Formal Languages and Logic

## Unit 2 - Properties of Regular Languages

---

4. Given a regular language  $L_1$  and  $L_2$  how can we check if  $L_1 = L_2$ ?

Regular Language  $L_1$

Regular Language  $L_2$

Regular Language  $L_1$

Regular expression  $R_1$

Regular Language  $L_2$

Regular expression  $R_2$

Regular Language  $L_1$

Regular expression  $R_1$

Equivalent  
NFA

Regular Language  $L_2$

Regular expression  $R_2$

Equivalent  
NFA

Regular Language  $L_1$

Regular expression  $R_1$

Equivalent

NFA

Construct DFA

Regular Language  $L_2$

Regular expression  $R_2$

Equivalent

NFA

Construct DFA

Regular Language  $L_1$

Regular expression  $R_1$

Equivalent  
NFA

Construct DFA

Minimize DFA

Regular Language  $L_2$

Regular expression  $R_1$

Equivalent  
NFA

Construct DFA

Minimize DFA

Regular Language  $L_1$

Regular expression  $R_1$

Equivalent  
NFA

Construct DFA

Minimize DFA

Regular Language  $L_2$

Regular expression  $R_1$

Equivalent  
NFA

Construct DFA

Minimize DFA

RE (A) =RE (B) iff the minimized DFA of both the expression are same as the minimized DFA is unique

### Example 1:

$$L_1(R_1) = R_1 = (0+1)^*(0+\lambda) \quad L_2(R_2) = R_2 = (1+\lambda)(1+0)^*$$

### Example 1:

$$(0+1)^*(0+\lambda)$$

$R_1$

$$(1+\lambda)(1+0)^*$$

$R_2$

### Example 1:

$$(0+1)^*(0+\lambda)$$

$R_1$

$$(1+\lambda)(1+0)^*$$

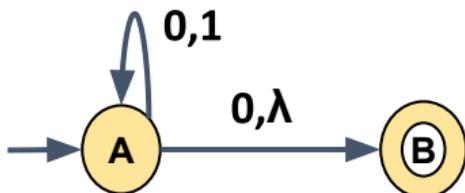

$R_2$

Convert the regular expression  $R_1$  and  $R_2$  to  
its equivalent NFA

### Example 1:

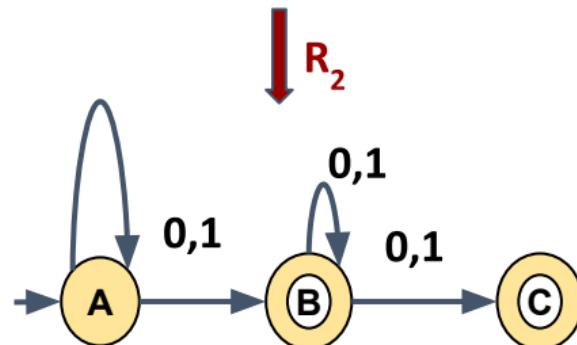

$$(0+1)^*(0+\lambda)$$

↓ R<sub>1</sub>

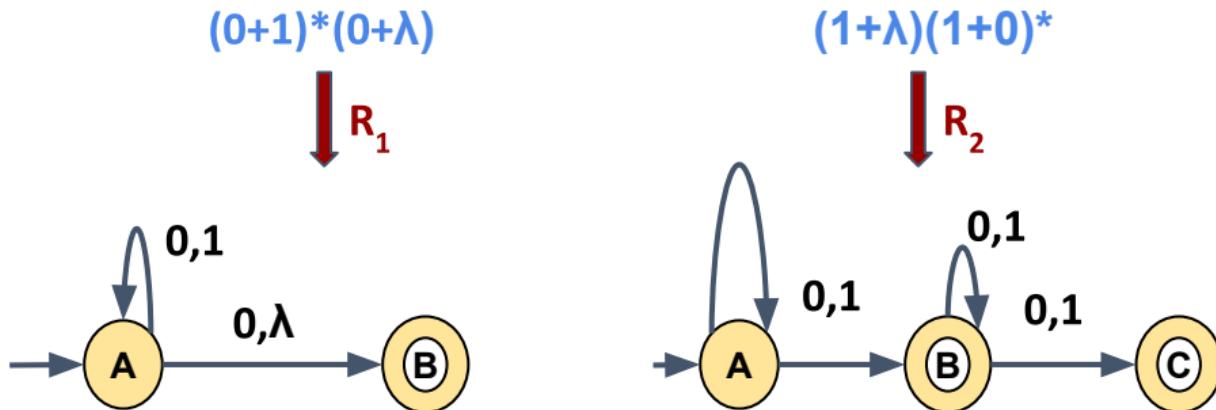

$$(1+\lambda)(1+0)^*$$

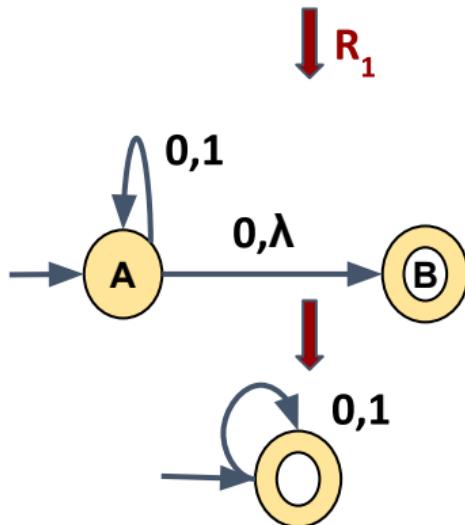

↓ R<sub>2</sub>

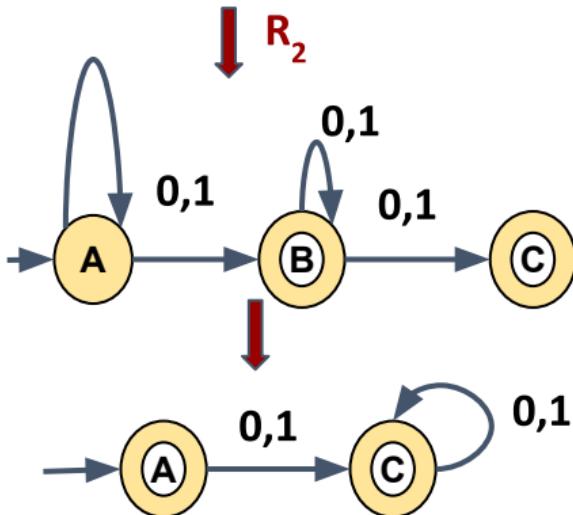

### Example 1:

Convert the  $R_1$  NFA and  $R_2$  NFA to its equivalent DFA

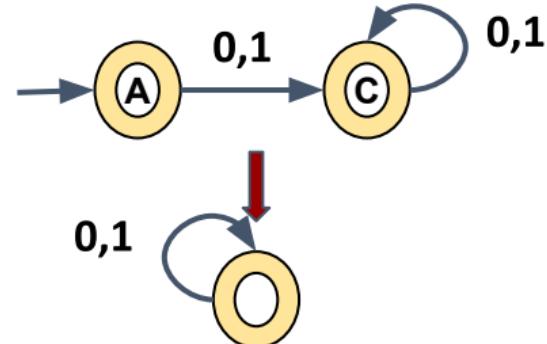

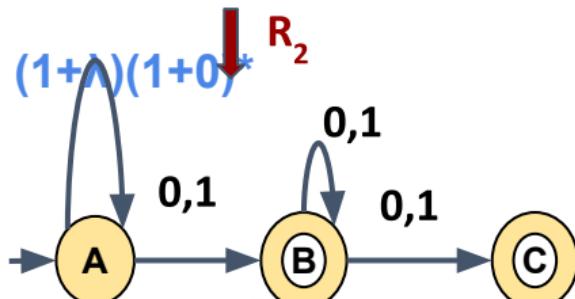

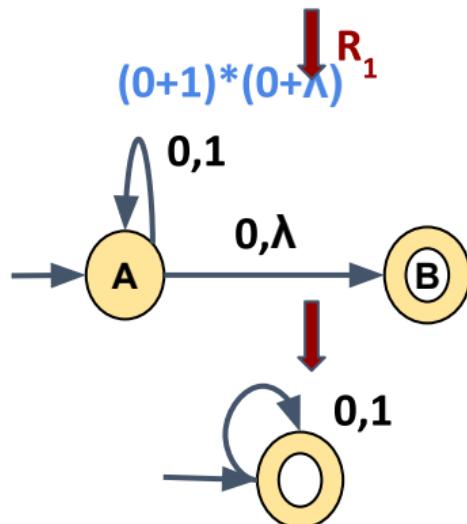

$R_1$  DFA is minimized

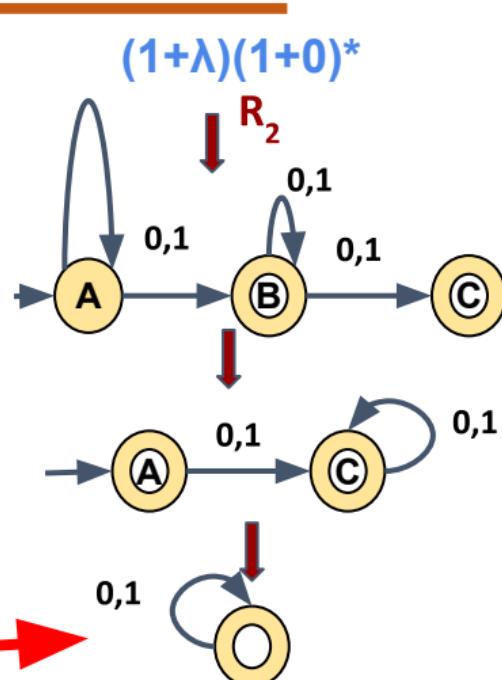

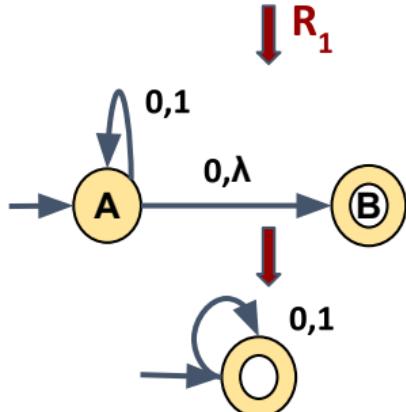

Minimize  $R_2$  DFA

### Example 1:

Example 1:  $(0+1)^*(0+\lambda)$

$$\begin{aligned} R_1 \text{ DFA} &= R_2 \text{ DFA} \\ L_1(R_1) &= L_2(R_2) \end{aligned}$$
